## Dallas Geeks Taking Readers on a Thrill Ride in Latest Novel

*Breakfield & Burkey tackle the threat of artificial intelligence in The Enigma Beyond on Jan. 7*

(Dallas, TX. December 27, 2019). Who will win the AI wars? *The Enigma Beyond* by Dallas tech experts and self-professed “geeks,” Charles Breakfield and Roxanne Burkey, takes readers on a cyber thrill ride to see who can outsmart artificial intelligence (AI) in a race to save humanity. Due for release Jan. 7, their latest tech thriller marks book 11 in the award-winning *The Enigma Series*.

*Enigma Series authors Roxanne Burkey & Charles Breakfield*

In *The Enigma Beyond – Who Won the AI Wars*, leaders of the dedicated R-Group run the risk of digital oblivion by genetically enhanced beings. The mistake, and man’s fatal flaw, is disbelieving that artificial intelligence is capable of innovative thinking or human emotions.

According to Burkey, an international Customer Experience Architect, “*Beyond* takes on what could realistically happen if technology turned against us.”

With over 140 colorful characters, *The Enigma Series* weaves current technology into action-packed standalone storylines with tongue-in-cheek humor, global locales and romance.

The series has won numerous awards. In August of 2019, *The Enigma Source*, book 10, received the Dan Poynter Global Legacy Award. The authors have also been recognized by the Texas Association

of Authors, Colorado Independent Publishers Association, Ind’Tale Magazine and other publications and organizations.

Reviews are calling the novels, “The smartest thing I’ve read in a long time,” and “They open your eyes to things happening in the cyber world you never knew existed.”

Breakfield and Burkey met in the '90s as contact center consultants for a manufacturer based in Richardson. In 2008, they decided to write tech fiction together as a creative outlet. In 2012, their first book, *The Enigma Factor*, saw its printing debut.

Their latest work marks book 11 in the best-selling series. The authors, who both travel extensively for their work, write the stories in their spare time using a mix of email, IM's (instant messaging) and Google hangouts.

Besides being entertaining, Breakfield, an IT expert with over 25 years of experience in security, networking and voice systems, said the books are meant to “get people to rethink the technology they use every day.”

“We hope folks realize that each one of us needs to trust ourselves first before trusting a computer. When you embrace your technology, there is a very thin line between being served and being a servant.”

The Enigma Beyond is available for eBook preorder on Amazon.com and will be online and in stores on Jan. 7. For more information, visit [enigmabookseries.com](http://enigmabookseries.com). [Official Book Trailer](#)
